

Customer Personality Analysis: Marketing Campaign Effectiveness, Purchase Behavior, and Sales Performance

Dashboard Overview

This dashboard provides a comprehensive analysis of customer demographics, purchasing behavior, product preferences, and sales performance. The objective is to understand customer characteristics, evaluate marketing campaign effectiveness, identify high-value customer segments, and generate actionable business insights for revenue growth.

1. Total Income by Marital Status (Pie Chart)

What Are We Showing?

This chart displays the distribution of total customer income across different marital status groups.

Key Findings

- Married customers contribute approximately 38.19% of total income.
- Together customers contribute approximately 26.38%.
- Single customers contribute approximately 20.92%.
- Divorced and Widow customers contribute a smaller share of income.

Business Insight

- Married and partnered customers represent the most valuable customer segments.
 - Family-oriented promotions and loyalty programs should focus on these groups.
-

2. Total Number of Customers by Education (Bar Chart)

What Are We Showing?

This chart shows the number of customers across different education levels.

Key Findings

- Graduation customers form the largest customer segment.
- PhD and Master degree holders are the second-largest groups.
- Basic education customers represent the smallest segment.

Business Insight

- Most customers are highly educated.

- Premium products and value-added services can be effectively marketed to these customers.
-

3. Total Income by Country (Bar Chart)

What Are We Showing?

This chart compares customer income across different countries.

Key Findings

- Spain contributes the highest total income.
- Saudi Arabia and Canada are among the next highest contributors.
- Mexico contributes the lowest total income.

Business Insight

- Spain is the most profitable market.
 - Country-specific marketing strategies can improve customer engagement and sales performance.
-

4. Selling Products Analysis (Horizontal Bar Chart)

What Are We Showing?

This chart compares sales performance across product categories.

Key Findings

- Wine products generate the highest sales (approximately 681K).
- Meat products generate the second-highest sales (approximately 374K).
- Gold products contribute approximately 99K.
- Fish, Fruits, and Sweet products generate comparatively lower sales.

Business Insight

- Wine and Meat products are the primary revenue drivers.
 - Cross-selling and promotional offers can improve sales of lower-performing products.
-

5. Total Purchase Distribution (Donut Chart)

What Are We Showing?

This chart illustrates the contribution of different product categories to overall purchases.

Key Findings

- Wine products account for nearly 49% of total spending.
- Meat products contribute approximately 27%.
- Sweet products contribute approximately 4%.
- Other product categories contribute smaller shares.

Business Insight

- Customer spending is heavily concentrated on Wine and Meat products.
 - Inventory planning should prioritize high-demand products.
-

6. Date Filter Analysis (Year, Quarter, Month, Day)

What Are We Showing?

The date hierarchy enables users to analyze customer activity and purchasing trends across different time periods.

Business Value

- Identifies seasonal purchasing patterns.
 - Supports monthly and quarterly performance monitoring.
 - Helps evaluate marketing campaign performance over time.
-

Dashboard Summary

The dashboard highlights the relationships between customer demographics, purchasing behavior, product preferences, and revenue generation. It provides a complete view of how different customer groups contribute to business performance.

Major Findings

- Married customers contribute the highest share of income and spending.

- Graduation-level customers represent the largest customer segment.
 - Spain generates the highest customer income among all countries.
 - Wine products are the most profitable product category.
 - Meat products are the second-largest revenue contributor.
 - Customer spending is concentrated in a few high-performing product categories.
-

Business Recommendations

Focus on High-Value Customers

- Target Married and Together customer segments.
- Develop loyalty and retention programs for high-spending customers.

Increase Revenue from Top Products

- Promote Wine and Meat products through bundle offers and discounts.
- Maintain adequate inventory levels for high-demand products.

Improve Marketing Campaigns

- Implement personalized marketing strategies.
- Target customers based on income, education, and purchasing behavior.

Expand High-Performing Markets

- Increase marketing investment in Spain and other high-income regions.
- Develop localized campaigns for different countries.

Improve Underperforming Categories

- Promote Fruits, Fish, and Sweet products using targeted campaigns.
 - Use cross-selling strategies with popular products.
-

Final Story of the Dashboard

The dashboard demonstrates that customer spending behavior is significantly influenced by demographic factors such as Income, Education Level, Marital Status, Geographic Location, and Product Preferences. Married customers and highly educated customers represent the most valuable customer groups, while Spain emerges as the strongest market. Wine and Meat products contribute the majority of revenue, indicating strong customer preference for these categories.

The analysis further reveals that targeted marketing, customer segmentation, personalized promotions, and customer retention strategies can substantially improve campaign effectiveness and business performance. By focusing on high-value customers, expanding successful markets, and optimizing product offerings, the company can increase customer engagement, maximize revenue, and achieve sustainable business growth.
